FYI. I didn't know about the last part (EPA and NIH no comments) until it was released.

Yes. CDC believes that there is no evidence to suggest that water levels below the laboratory limit of detection of 10 parts per billion (ppb) would have adverse health effects, including for pregnant women.

We discussed this with both NIH and EPA. They had no additional suggestions.

Robin

Here's a question that we need help answering from cdc today

In the view of the CDC, are water samples with levels below 10 parts per billion (the laboratory detection limit) health protective of the population, including pregnant women?

Thanks Allison

Hi Allison,

We are not sure what you need. The media advisory is below. It was sent out by Barbara Reynolds at 5:45.

If there is something else you are need, please let me know.

Thank you,

Sandy
